VANQUISH RT videoPRO

P 5113

Vanquish RT Video PRO is equipped with FM transmitter, which allows you to broadcast your tunes to any nearby radio, confined inside a 7-milimeter thin aluminium case. All you need to do now to start your own broadcast is to push one button. The device supports all the most common audio formats (MP3, WMA, WAV), it's equipped with a built-in FM radio and a voice recorder allowing you to make voice notes.

Picture browser supports both JPG and BMP and displays them on a large 2" TFT 170x220 screen. The player also allows you to playback video files, read TXT files and store any data you can think of.

Vanquish RT Video PRO features a new, user-friendly, intuitive Graphic User Interface. The buttons have been precisely and carefully carved with a laser in its aluminium case. The durability of the device to sustain physical damage has been increased by the use of a light yet very strong aluminium alloy.

*FM transmission feature is disabled by default due to imprecise EU regulations. To enable FM transmission please upgrade the player's firmware by installing the software included on the CD.
